CONNECTORS AND ADAPTERS

We supply several types of connectors/adapters such as 7/16, N, TNC, BNC, F, FME, SMA, SMB, MCX, MMCX, U.FL etc.; of these and of all other non cited connector types we supply several models: for cable assembly, for SMB soldering, for traditional PCB board soldering, for edge mount, with bulkhead or longer thread.

Below an overview of the main SMA models.

It is strongly recommended to discuss each situation with our R&D department first, to better identify the best suited solution depending on your specific requirements while also taking into account that we are able to design new connectors based on your specifications.

It should be noted that the vast majority of our antennas can be supplied with different cable types than the ones indicated on their datasheet; it is thus strongly recommended to discuss the cable choice with our R&D to make sure to identify the best suited option depending on the distance to be covered and on the operating frequency range.
